2018

Convert your Windows PowerShell module  
so its compatible with PowerShell Core 6.x

Wojciech Sciesinski

# Agenda

- Why me?
- What does PowerShell Core 6.x compatibility mean?
- Why? Do you really need this?
- Where we are? How to recognize the running environment?
- What are? The main areas of incompatibility
- Does this work? How to test?
- Other gotchas
- Finally!

# Why me?

- I have done the work to adapt the Pester PowerShell module to work on PowerShell Core 6.x  
<http://bit.ly/2qC7OfH> and <http://bit.ly/2qD2Qzg>
- I have made the New-OutputObject PowerShell module
- I have done some work to adapt the PScribo module to be compatible with PowerShell Core 6.x

# Why me?

- I have made the New-OutputObject PowerShell module

The screenshot shows the PowerShell Gallery website. The header includes the PowerShell logo and the text "PowerShell Gallery". On the right, there are links for "Register" and "Sign in". The navigation bar contains links for "Home", "Items", "Publish", "Statistics", "Documentation", and "Status". A search bar labeled "Search Items" is on the right. The main content area displays the "New-OutputObject 0.9.11" module page. On the left, there is a large PowerShell logo, the download count "222 Downloads", and the version number "63". The description states: "The PowerShell module intended for preparing PowerShell objects what the next help output filesystem objects, means: files and folders." Under the "Inspect" section, the command `PS> Save-Module -Name New-OutputObject -Path <path>` is shown. Under the "Install" section, the command `PS> Install-Module -Name New-OutputObject` is shown.

 New-OutputObject 0.9.11

The PowerShell module intended for preparing PowerShell objects what the next help output filesystem objects, means: files and folders.

Inspect

```
PS> Save-Module -Name New-OutputObject -Path <path>
```

Install

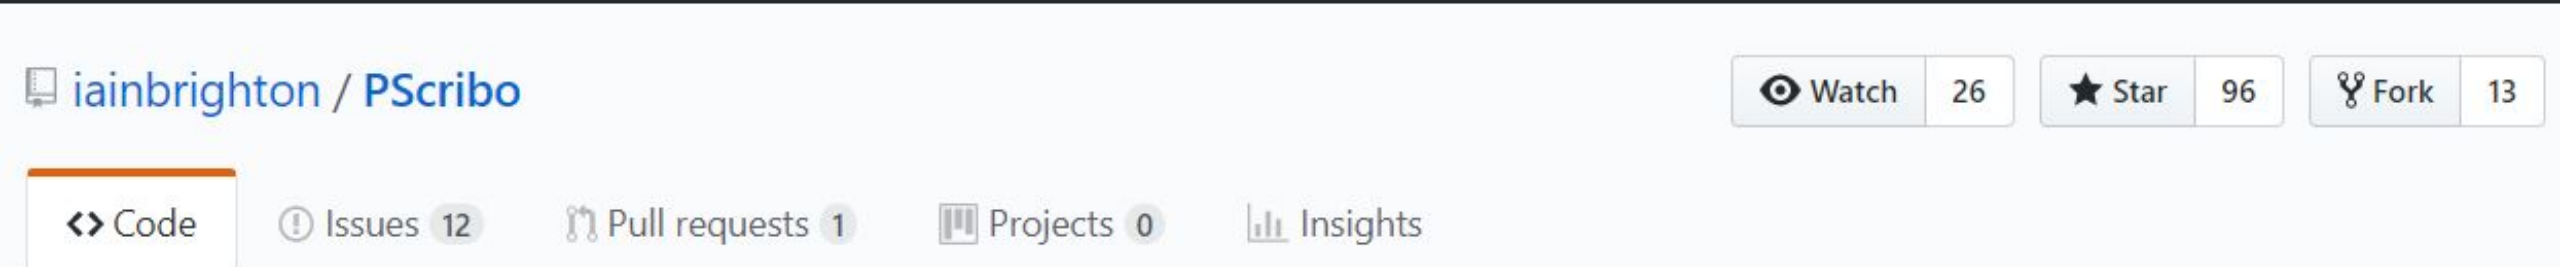

```
PS> Install-Module -Name New-OutputObject
```

222 Downloads

63

# Why me?

- I have done some work to adapt the PScribo module to be compatible with PowerShell Core 6.x

PowerShell documentation framework

## Who else?

- Who else contributed to adapt Pester for PSCore 6.x ?

Felix Becker  
felixfbecker

Gavin Eke  
GavinEke

Joel Bennett  
Jaykul

Edmund Dipple  
elmundio87

Jakub Jareš  
nohwnd

In alphabetical order

## What does PowerShell Core 6.x compatibility mean?

- Can be run using Windows PowerShell
- Can be run using PowerShell Core 6.x on:

OS's are listed in the alphabetical order :-P

- Work properly (as expected) on all supported operating systems

# Why?

- To reuse your or your team skills
- To extend existing workflows (e.g. a continues integration) for Linux or unify used tools
- The use of CI platforms free features e.g. <https://travis-ci.org/>
- Or to do everything for which PowerShell Core “is optimized for dealing with structured data (e.g. JSON, CSV, XML, etc.), REST APIs, and object models.”<sup>1</sup>

1. The quote from the PowerShell project description on GitHub <https://github.com/powershell/powershell>

## Can I?

- Is your module dependent on from other modules and tools?
  - Check the PowerShell Gallery and search using the tag “PSEdition\_Core”  
<http://bit.ly/2qBx2e1>
  - Examine a project/tool documentation
  - Try find a replacement
- Read “Known Issues” at the PowerShell project site <http://bit.ly/2IXiY5l>
- Do you really have to reinvent a wheel? Maybe you can use/extend Ansible? ;-) -> please attend my second session on Friday “Use your PowerShell skills to extend Ansible workflows. Create your own Ansible module for Windows platform”.

## Where are we?

- PowerShell way – the Get-EnvironmentInformation function  
<http://bit.ly/2qBppDs> creates the dedicated variable \$Environment
- Pester way – the GetPesterOS function returns the name of the OS run  
<http://bit.ly/2H8tDcE>
- Direct check of \$PSVersionTable and defined variables values

# Demo – 1

How to detect an environment?

# What are? The main areas of incompatibility – Filesystem

```
PS C:\Windows\system32> Get-ChildItem c:\
```

Directory: C:\

Mode	LastWriteTime	Length	Name
d-----	1/22/2018 11:29 AM		PerfLogs
d-r---	4/17/2018 2:25 AM		Program Files
d-r---	1/22/2018 11:24 AM		Program Files (x86)
d-r---	1/22/2018 11:29 AM		Users
d----l	3/10/2018 10:00 AM		vagrant
d-----	4/1/2018 8:03 AM		Windows

```
PS /home/wojtek> Get-ChildItem /
```

Directory: /

Mode	LastWriteTime	Length	Name
d----l	8/3/17 1:32 AM		bin
d-r---	4/15/18 11:21 PM		boot
d-r---	4/17/18 11:00 AM		dev
d-r---	4/17/18 11:00 AM		etc
d-r---	8/3/17 1:32 AM		home
d----l	8/3/17 1:32 AM		lib
d----l	8/3/17 1:32 AM		lib64
d-----	9/30/16 6:40 PM		lost+found
d-r---	8/3/17 1:32 AM		media
d-r---	4/15/18 11:23 PM		misc

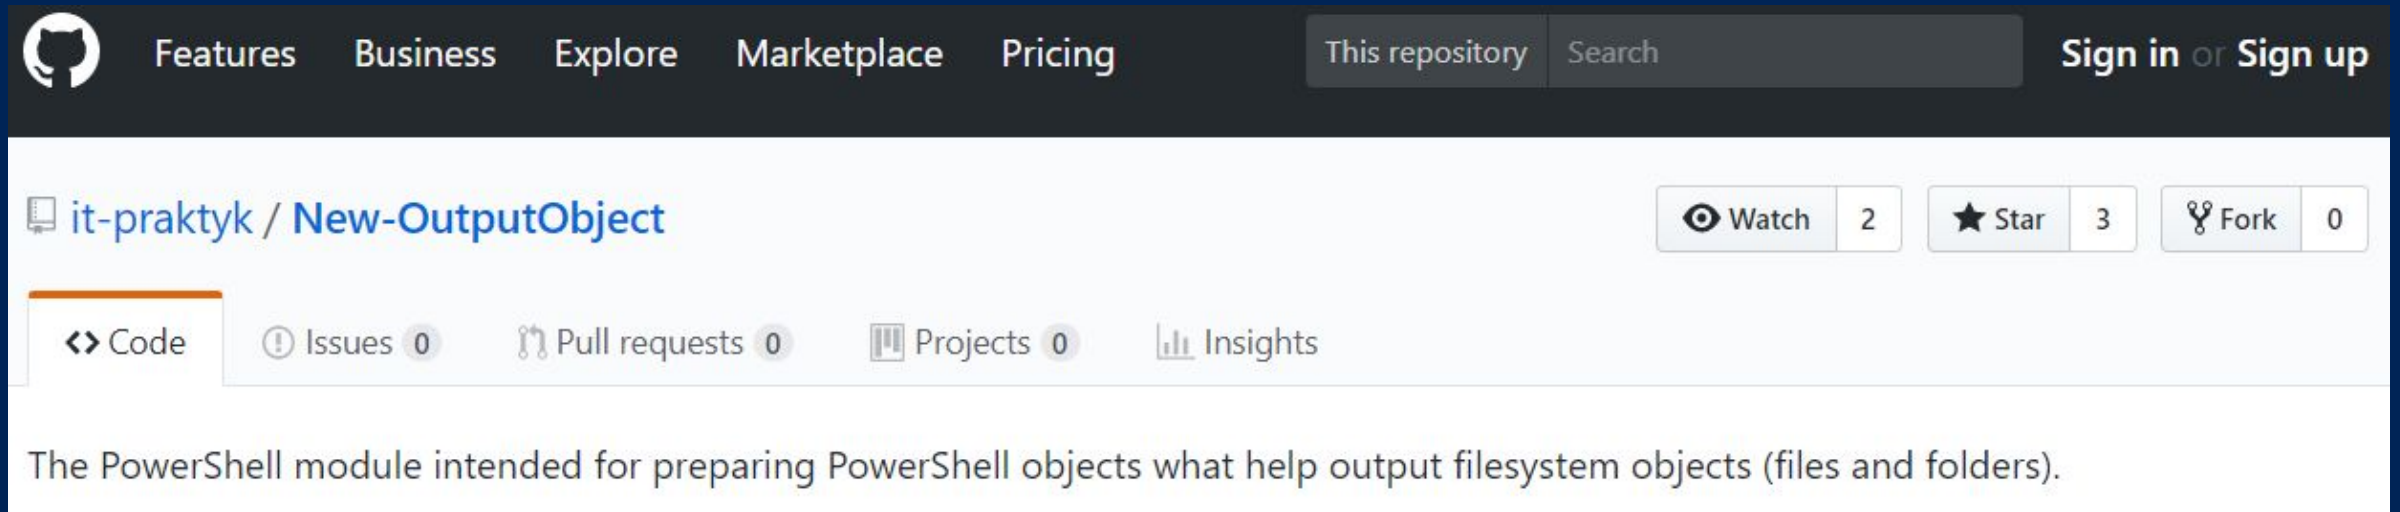

- Use methods provided by .Net Core
- Use declared variables
- Use dedicated cmdlets

# Demo – 2

What are? The main areas of incompatibility – Filesystem

# What? – Output – I

## The New-OutputObject PowerShell module

The screenshot shows the GitHub repository page for 'it-praktyk / New-OutputObject'. The repository is under the 'it-praktyk' organization. It has 2 watchers, 3 stars, and 0 forks. The repository is currently empty, with 0 issues, 0 pull requests, 0 projects, and 0 insights. The description states: 'The PowerShell module intended for preparing PowerShell objects what help output filesystem objects (files and folders).'

The PowerShell module intended for preparing PowerShell objects what help output filesystem objects (files and folders).

# Demo – 3

What are? The main areas of incompatibility – Output

# What are? The main areas of incompatibility – Output – II

- End of Lines (EOL)
  - CR (Linux), CRLF (Windows)
  - can/should be converted? <http://bit.ly/2vjGszB>
  - you can use the unix2dos tool
- Control characters
  - ``n`, ``r`
  - special cases ? – PSCribo

# What are? The main areas of incompatibility – Output – II

## Describing OutText.Internal\OutTextTOC

[ - ] outputs TOC name and section break 238ms

Expected regular expression '^Table of contents\r  
-+' to case sensitively match 'Table of contents'

-----  
Heading 1

Heading 2

', but it did not match.

359: \$result | Should MatchExactly \$expected;

at Invoke-LegacyAssertion, /usr/local/share/powershell/Modules/Pester/4.3.1/Functions/Assertions/Should.ps1: line 188

at <ScriptBlock>, /home/wojtek/Scripts/PScripto/Tests/Plugins/OutText.Tests.ps1: line 359

[ - ] adds section numbers when "EnableSectionNumbering" is enabled (#20) 194ms

Expected regular expression '^Table of contents\r  
-+\r  
1\s+Heading 1\r  
1.1\s+Heading 2\r  
' to match 'Table of contents'

-----  
1\s+Heading 1\r

1.1\s+Heading 2\r

\$' to match 'Table of contents'

-----  
1 Heading 1

1.1 Heading 2

', but it did not match.

379: \$result | Should Match \$expected;

at Invoke-LegacyAssertion, /usr/local/share/powershell/Modules/Pester/4.3.1/Functions/Assertions/Should.ps1: line 188

at <ScriptBlock>, /home/wojtek/Scripts/PScripto/Tests/Plugins/OutText.Tests.ps1: line 379

# Demo – 4

What are? The main areas of incompatibility – Output – control characters

# What are? The main areas of incompatibility

- OS specific functions and tools or lack of them

- Do inaccessible feature everything?
  - replace them
  - use “hacks”
  - skip if the feature is not critical

# Demo – 5

What are? The main areas of incompatibility  
OS specific functions and tools or lack of them

## Does this work? How to test?

- If you don't have tests yet write them now
- Tests also have to be update for compatibility!
- Test using CI solutions – you can use Travis-CI to tests your open source code on Linux and macOS for free
- Read Doug's Finke blog post “PowerShell – How to test your scripts for Windows, Linux and macOS” <http://bit.ly/2H9jWpW>

## Other gotchas

- Case sensitivity <http://bit.ly/2qG3ZVT>
- .gitconfig <http://bit.ly/2qH69Fm> or not <http://bit.ly/2H8g3WN>
- A direct sharing of the repository folder between OS's can be tricky  
you can modify the setting 'filemode = false' in the file .git/config

# Demo – 6

Gotchas

# Finally!

- Update tags in the module manifest and add
  - 'PSEdition\_Core'
  - 'PSEdition\_Desktop'
- Find modules with the 'PSEdition\_Core' tag in the PowerShell Gallery  
<http://bit.ly/2qBx2e1>

# Demo - 7

Run some tests

# Summary

- Adapting of the existing code is possible
- That work requires
  - tests
  - knowledge about
    - the code
    - operating systems
  - brain work – as an opposite to manual ;-)

## Next Steps

- Now: 30 min break (if we are on time)
- Next: Workshops (17:00 – 20:00)
  - The Power of the Dark Side: Offensive PowerShell – Track 1
  - PlatyPS: From 0 to 1 and beyond – Track 2
  - Bring Existing Infrastructure under Code Control – Track 3
